

More stuff to go with and work for

4-Coil Sport Bikes

The (T-101-HAY) Tach Adapter provides a Tach Signal which is compatible with the Dynatek Shift Minders® and Shift Lights.

■ INSTRUCTIONS

Connect the Adapter
As outlined below.

1) Black Wires:

■ Connect one black wire to each of the Ignition Coil negative wires.
This connection should be made at a point as close to the Ignition Coil as possible.

2) Green Wire:

■ Connect to a device requiring a positive pulse Tach Signal. This would connect to the **Green** wire on a Dyna Shift Minder®.

This will provide a standard two-pulse signal per crankshaft revolution.
