

More stuff to go with and work for

4-Coil Sport Bikes

The (T-101-MSD) Tach Adapter provides a Tach Signal which is compatible with the MSD® RPM Switch and MSD® Shift Lights.

■ INSTRUCTIONS

Connect the Adapter

As outlined below:

1) Black Wires:

■ Connect one black wire to each of the Ignition Coil negative wires.

This connection should be made at a point as close to the Ignition Coil as possible.

2) White Wire:

■ Connect to a device requiring a negative pulse Tach Signal. This would connect to the White wire on a MSD® RPM Activation Switch.

This will provide a standard two-pulse signal per crankshaft revolution.

NOTE - A Half RPM Chip will be needed for MSD® devices.
